

 **CURRENT POSITION**

Working Professional transitioning toward Data Science.

Python Data Analysis Web Development

 **TARGET GOAL**

Become a **Data Scientist** within **3 months** — build job-ready portfolio + technical fluency for interviews and role transition.

📊 SKILL GAP ANALYSIS

CATEGORY	YOU HAVE	GAP TO CLOSE
Programming	Python, Web Dev logic	Pandas/NumPy fluency, OOP for ML pipelines
Statistics & Math	Basic analytical thinking	Probability, Hypothesis Testing, Linear Algebra
Machine Learning	None formal	Scikit-learn, model evaluation, feature engineering
Tools	Dev environment familiarity	SQL, Jupyter, Git, Tableau/PowerBI
Deployment	Web Dev (huge advantage!)	Flask/FastAPI model APIs, cloud basics

 LEARNING PLAN

 SUGGESTED PROJECTS

WEEKS	FOCUS	PROJECT	SKILL PROVEN
1-2	Python for Data Science: NumPy, Pandas, Matplotlib	EDA on real-world dataset (Kaggle)	Pandas, visualization
3-4	SQL + Statistics & Probability foundations	Sales/Customer churn prediction model	ML, feature engineering
5-7	Machine Learning: Scikit-learn, regression, classification	Deployed ML web app (your edge!)	Full-stack + Data Science
8-9	Model evaluation, feature engineering, mini-projects	SQL-based business dashboard	SQL, BI tools
10-11	Deploy ML models using Flask/FastAPI (leverage web dev skill)		
12	Portfolio polish, resume, mock interviews		

🌐 NETWORKING STRATEGY

CHANNEL	ACTION
LinkedIn	Post weekly project breakdowns; use #DataScience #100DaysOfCode; engage with DS creators daily
Communities	Join Kaggle, Data Science Discords, local meetups; participate in 1 Kaggle competition
Direct Outreach	Message 3-5 Data Scientists/week for informational chats; ask for resume feedback

📅 MONTHLY MILESTONES

1

Foundation Month
Master Pandas, NumPy, SQL, stats basics. Complete 1 EDA project. Start LinkedIn content.

2

ML Core Month
Build 2 ML models (regression + classification). Learn evaluation metrics. Grow network outreach.

3

Launch Month
Deploy flagship project, finalize portfolio + resume, apply to 20+ roles, run mock interviews.

< IMMEDIATE NEXT ACTIONS (THIS WEEK)

1. Enroll in a Python-for-Data-Science course and complete NumPy/Pandas basics.

2. Create a dedicated GitHub + LinkedIn "Data Science journey" presence today.

3. Pick your first EDA dataset from Kaggle and start exploring it.
